Laetus UP

The next generation of serialization

Laetus, the track & trace pioneer, introduces with Laetus UP a serialization platform to the market. It achieves new standards of usability without sacrificing reliability.

Laetus UP works like a system kit. All building blocks – hardware and software – are based on the same „architecture“ and can be perfectly integrated and easily assembled on the UP platform. Easy to use, with lots of freedom for extension.

Due to the intuitive GUI, a faster integration and modular design, the platform is excellent for applications in the pharmaceutical, medical technology and food industries.

Flexible

- Supports a wide variety of printers
- Different cameras can be used
- Free line & plant structure
- Free format mapping
- Applicable in many industries

Unified

- Multiple applications (functional topology) for T & T, QI, automation, monitoring of OEE
- Common tools (user management, audit trail, reporting)
- Unified “look & feel” across all applications (GUI)

Simple

- Solution editor: (automatic configuration, reporting, system integration/mapping, design etc.)
- Adaptable to customer processes
- Controlled update, upgrade and migration
